

# Enterprise Architecture Services

Ensuring full alignment between Business, Data, Applications and Technology.

A success-critical approach to enable the realisation of major business benefits.

## What are Enterprise Architecture Services?

Enterprise Architecture Services describes the empirical assessment of an organisation to diagnose success-limiting factors. Recommendations are produced to bridge the gap between your business' current situation and where it needs to be. Assessment explores all or some of the following elements:

**Business | Data | Applications | Technology**

## Why Enterprise Architecture Services?

**Do you know what you want your business to achieve but don't know how to structure an enterprise-wide environment to realise those goals?**

Enterprise Architecture Services provides a robust, incremental roadmap enabling success through enterprise-wide buy-in; closely managed risk and consistent realisation of business targets.

## The process

Using TOGAF®, information is collected and analysed to provide an in-depth understanding of your business. First-hand research is conducted on-site, including interviews with all key stakeholders and in-depth exploration into existing processes, infrastructure and software. This enables the transformation of your organisation to realise key benefits such as profit maximisation, cost savings and internal efficiencies.

## Why you should choose Amadeus

- Independent, evidence-based advice
- Clear vision to ensure organisation-wide support
- Incremental roadmap to minimise implementation risk
- Ongoing monitoring of criteria essential to business success
- A proven track record of enabling customers to achieve business goals.
